

Scalable and Simple to Use without Limitations of Legacy Storage

ndFlexStore, an add-on application to NetDocuments, solves the long-standing issue of data residency, document locality, and co-mingling of content matters.

ndFlexStore empowers entities that need the ultimate flexibility in geo-aware and client/matter-aware document storage.

ndFlexStore solves *Information governance policies* that regions or countries define for the treatment of how and where entities must store data to conduct business, resulting in a complex landscape to navigate.

Here's the problem...

- Entities are concerned about storing their data In- or out-of-countries or regions for privacy due to fear of subpoena.
- Finding information using one global library to search, use, and administer remotely on the cloud or private storage is a must.
- The requirement keeps growing to store information in every corner of the world with extended regional storage and customer-managed storage.
- The need for no co-mingling of a client matter.

Flexible storage options, search, and worldwide locations

Privacy, Reliability, and Peace of Mind. Provides peace of mind that after you define your storage location in ndFlexStore, you have a reliable method to meet your information governance policies.

Physical Location Determined by Settings. The document workspace (matter, client, or another attribute) or any other configured profile metadata field automatically determines the actual physical location of each file.

Transparent. ndFlexStore automatically stores data as assigned and is transparent to your users. Provides the ease of use via the NetDocuments cloud. Access, edit, and save documents and emails even if you store it in another country on any of the available integrations.

Ease of Administration and Control. Gives you as an administrator the ability to assign where to physically store data, including documents and emails, in a specific country or region.

No Need to Learn a New System. There is no need to set up a new system, learn how to administrate it, and then teach your users how to use it. Easily configure a location to store data in a designated area of the world, meeting your information governance policies as to where and how to store data, and you are ready to go.

Security. ndFlexStore provides regional cloud storage and customer-managed storage both leveraging the NetDocuments application layer and Encryption Key Management (EKM) security, enabling users and administrators use NetDocuments as a universal interface to the various storage options.

ndFlexStore extends security and global library search to...

NetDocuments Regional Cloud Storage

The NetDocuments Regional Storage Facility (RSF) located in the United States, United Kingdom, Australia, and more locations coming.

Microsoft Azure Regional Cloud Storage

NetDocuments extends regional storage through Microsoft Azure integration in 36 regions announced. These are called Regional Storage by Azure (RSA). Regions of the world include US, South America, UK, Europe, Germany, Asia Pacific, China, India, Australia, and six more regions expected soon.

Customer-managed Storage

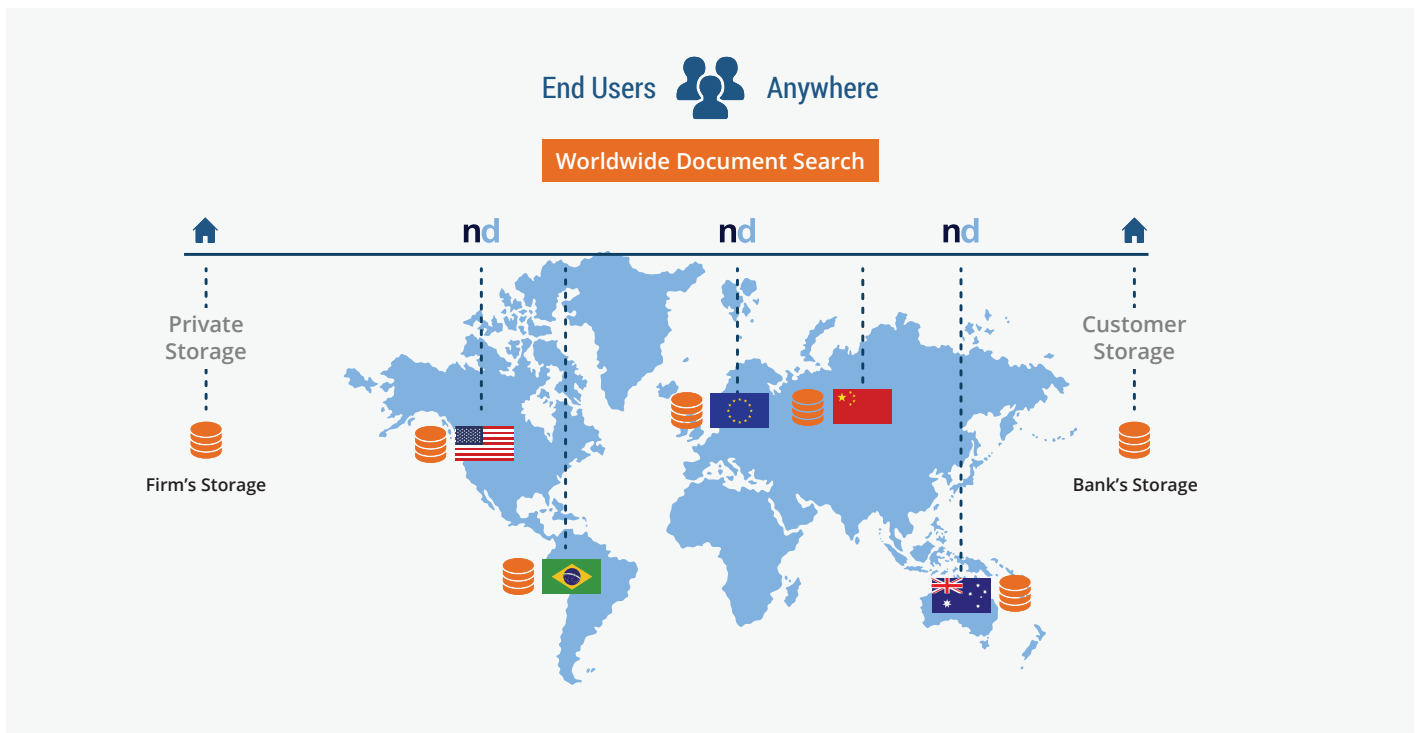

ndFlexStore extends customer-managed storage or private storage through NetDocuments integration at any private location in the world, either from your entities location, a client's on-site location, or any other location to meet your needs.

These are Customer-managed Storage Options, which provide the same encryption and security benefits to every combination of storage as NetDocuments, including the basic EKM technology on every document.

Dual Jurisdiction options include:

- **EKM Cloud Add-on** — A Customer Managed Encryption Key (CMEK) using the NetDocuments Hardware Security Module (HSM).
- **EKM Private Add-on** — Provides a Private CMEK using a Private HSM.

With ndFlexStore, any combination of storage is available under *one global library*, which you can access, anytime and anywhere to perform a worldwide search or navigate to get any document or email, subject only to the security and ethical wall restrictions.

ndFlexStore is available as an add-on product. Contact [NetDocuments Sales](#) for information.
